DAIRY AND CREAMERY.

SHOT AND NO MISTAKE,

You Can Spot Her Every Time, Even in a Crowd, if You Learn Per Points. Select the Cow with Good Pedigree and Large Udder and Milk Veins.

Some of the requisites in a dairy cow are large digestive powers, indicated by a capacious stomach, suggestive of a ability, broad hips, deep loins and sides, and evidences of a strong, robust constitution, with plenty of room for heart and lung action, says The Indiana Farmer. These are all of importance, and should ing the most profitable returns.

and beyond, well up behind, well for- this is not correct. ward, is broad and moderately deep, vided means for filling it.

apparatus she may have.

indications mentioned are found all daylight. other considerations are of minor im- Again, many have been induced by essentials are found.

milking dam, grandam and great-grandam. This will increase the probabil-

ness requirements alluded to will lay nests. the foundation for breeding a herd of keep. Of course no males should be vals of two weeks, giving three sprays. kept of such crosses for breeding purposes.-American Dairyman.

Creamery Tips.

and situated as he is.

few suggestions.

sour butter made. In the second place, use packages to packages; of course that means low

When you get ready to ship select your commission merchant. Ship your goods fresh-"they are never better"and ship every week, thus giving him a chance to get up a line of customers that can depend on getting your butter every week. In that way the trade gets to know your brand, it suits the consumers, and they will pay good prices rather than take the chance of some other creamery

suiting. The maker who sells one week and ships the next, and keeps changing commission men, can never expect to get top prices, as one house does not handle the butter long enough or regularly enough

to get up a reputation. We offer these few suggestions, hoping it may benefit some shipper, as we realize their interests are identical with

those of the commission merchant. If not you are losing money.

THE CODLING MOTH.

The Great Enemy of the Apple, Pear and sun, and pure, sparkling waters, trick-Quince-How to Control It. The most costly enemy with which

into them from Europe.

teristics are substantially as follows: fully to the receptacle holding it-the its way out at the side of the fruit, udder and the veins leading thereto. usually at evening or night, and The cow may assimilate a large amount lowers itself to the ground by its web. of food which goes mostly to lay on or crawls down to the trunk of the tree. flesh and fat, but if she has a long, broad | In either case it generally seeks a shelter and deep udder with large milk veins in the curling, dead bark of the tree as a for digestion and assimilation is active its cocoon. Whence in about ten days in filling this receptacle; in fact the it emerges as a moth. Some observers ndder is the first point to consider maintain that in the warmer districts, time will have come. Who can foresee in the cursory examination of a cow. If three or four generations appear in one it reaches to the back line of the thighs season. But my conclusions are that

Nearly all writers on this insect have with teats well apart and of good size, blundered in saying the worm leaves the skin soft and elastic, it may be inferred apple in daylight, and that the apple with confidence that nature has pro- often falls to the ground with the worm inside. It is seldom that an apple can If the udder be a small round cylinder be found on the ground with the worm hanging down in front of the thighs still in it, except in overripe ones in autlike a six quart pail the cow cannot be umn. And as a rule the worm never a profitable milker, whatever digestive leaves the apple until well into twilight or night. These habits protect it from A vellow skin and the inside of her death by the fruit being eaten, and from ears to match is almost universally re- birds and predacious insects that would garded as present in the cow that gives create sad havoc with such a defenseless, rich milk yellow in color. But after the nice, fat tid-bit, if it exposed itself in

portance, more to be admired as a mat- mistakes of writers to go to great exter of fancy than for any real value they pense in placing bright lights in their ssess in themselves. Among them are orchards, surrounded with moth traps an escutcheon that is first class, a long and even with peculiar smells added, to slim tail, an attractive dished face, drop- entice the moth to its destruction; and ping and small waxy horns and a pre- to hang in the branches of trees vessels ferred color of hair. Look for these, and filled with different foods, drinks and get as many of them combined in the smells in liquid form, so as to inveigle animal as possible, but let it be after the the moth to drown itself therein. The facts are, it being a twilight insect it Let good appearances be coupled with naturally shuns lights of all kinds, and performance, and if the cow be 5 years having only rudimentary mouth parts, old or younger and will yield 6,000 it is incapable of taking any food, liquid pounds of good milk or more per annum or sold, during its life as a moth. Its she may be safely trusted, without re-smelling apparatus has not been fully gard to fancy points. She must consume studied, but it is safe to say it would and digest the food to make it, and her never be drawn into trouble by anything machinery and the power to work the it could smell. This moth is a thoroughly machinery successfully are the main protected insect. It has a few insect eneconsiderations after all. Still another immies, lately noticed, that may in time portant matter in selecting a cow, even get the best of it. One evening late in of common blood, is her pedigree or line autumn while assorting a great pile of of descent. Choose one from a large apples in an orchard, as twilight approached, the codling worms began to leave the pile of apples in large numbers. ities of success in her progeny in breed. The common yellow wasps-"yellow ing her to a thoroughbred bull from deep jackets"-had not gone to bed yet, and they nipped up every worm as soon as it A few cows selected with all the busi- left cover and carried it away to their

Great effort should be made to kill all dairy cows that will prove a source of the moths as they appear in the spring, perpetual delight and profit to the owner; and the second brood in autumn and on the other hand, it is a loss of time and winter. The spring brood can be well money to rear a calf for the dairy from nigh annihilated by spraying all apple, a poor milker. It is bad enough to keep pear and quince trees as soon as the an unprofitable cow for a season, but it flowers have fallen, with a spray made is deliberately throwing away good food by constantly stirring while in use one to breed such a cow with the proof pound of paris green in 150 gallons of that the heifer will never pay for her water, then repeating the dose at inter-

All rough bark should be scraped from

the trees. Then about the middle of May cloth bands made from coarse sacking, should be wound around the A well known and reliable firm of trunk of each tree, midway between the dealers in dairy products in Boston con- ground and the branches. The eighth tribute to The Creamery Journal the folday after these are placed in position lowing suggestions about packing and they should be taken off and all the cocoons under them mashed and the bands While we indorse the recommenda- replaced, This process should be retion to have at least a portion of the peated every eighth day throughout the cows come in during the fall for winter season until August. After that leave dairy, at the same time we realize that the bands in position until March, and the important point at present is, how then kill again. The autumn work is can the farmer make the most money equally important. Every one who has out of his herd as they are at present. an orchard of the above fruits should have, as far from the orchard as conven-Of course the more money the cream- ient, an assorting and packing house, ery gets out of its product the more the into which the fruit should be stored farmer gets for his milk or cream, as the until marketed. The house should be case may be; so we venture to make a practically tight, with plenty of windows covered with fine wire gauze. In the first place, the butter must be Such a house would be cooler if plasgood in order to command the top mar- tered. Then, as soon as all the fruit is ket price, not forgetting that in very marketed, place every box, basket, ladwarm weather extra precautions must der, everything used in handling the be taken in the matter of using ice when fruit, into the packing house and close gathering cream, watching it closely it until the next June. Then if the during ripening process, and perhaps building is tight, as it should be, the churning a little oftener. By doing so moths cannot get out, and will be found we believe there would be much less dead on the wire screens by the tens of thousands.

No board fences, nor anything else, suit the market. Butter packed in soft which the worm can safely spin up in, wood tubs, assorted sizes, commands the should be permitted around an orchard. best price here. Be sure and soak the Such is the price of good sound fruit. tubs for twenty-four hours before using, Farmers, do your whole duty by your as quite a number of tubs of butter spoil apples and pears. For near markets on sides, owing to neglect in preparing there seems to be as much or more money permanently in growing good winter apples as any other fruit. Do not fear over production or competition. Early summer apples, near a good mar-ket, are also profitable. These if the orchard is not near other orehards, and no winter apples, pears or quinces are grown in or near it, will receive no damage from the codling moth.
D. B. Wier.

A Bogus Interview.

SAN FRANCISCO, February 11.-Some one has evidently been imposing upon the Eastern people, as is shown by an interview purporting to be with Peter Jackson, the colored pugilist, sent from Vandalia, Ill. Jackson is here for his fight with Corbett, and will be here sev-
